

MVP Feature List

From DM to Confirmed Order | Prioritisation and Scope

OLUSOLA AYODEJI EZEKIEL

MVP Goal

Test whether one structured checkout link can reduce manual back-and-forth after a buyer has already agreed to purchase through WhatsApp or Instagram.

Prioritisation Rule

Rule

If a feature does not help the seller create, send, complete or track an order, it waits.

P0 = essential for the MVP. P1 = useful next step after the core workflow is proven. P2 = later growth or optimisation.

P0 - Must Have

Feature	Primary user	Why it is needed	Status
Seller dashboard	Seller	Create and track orders from one place.	Included
Create order	Seller	Capture agreed product, quantity and amount.	Included
Shareable checkout link	Seller	Move the final order step into one structured flow.	Included
Order summary	Buyer	Verify product, quantity and total before paying.	Included
Buyer and delivery details	Buyer	Collect fulfilment information consistently.	Included
Payment option	Buyer	Complete the core checkout journey.	Included
Simulated payment	Buyer	Demonstrate the payment step without live integration.	Included
Confirmation + reference	Buyer	Create a clear end state and order identifier.	Included
Order details + status	Seller	Keep customer, payment and delivery data together.	Included

P0 Acceptance Summary

- Seller can create an order with the agreed product, quantity and amount.
- Seller can generate and share a checkout link.
- Buyer can review the order before continuing.
- Buyer can provide the minimum delivery information required for fulfilment.
- Buyer can choose a payment path and reach a successful simulated confirmation.
- Seller can see the completed order and its fulfilment information.

P1 - Next After Validation

Feature	Primary user	Why it matters	Status
Fulfilment status updates	Seller	Supports processing after payment.	Next
Customer history	Seller	Helps with repeat customers and context.	Next
Basic order analytics	Seller	Shows lightweight operational performance.	Next
Light inventory	Seller	Reduces overselling once usage grows.	Next

P2 - Later Growth and Optimisation

Feature	Primary user	Why it waits	Status
Storefront	Seller / Buyer	Supports discovery, but discovery is not the current problem.	Later
Discounts and promotions	Seller	Supports growth after checkout is validated.	Later
CRM and loyalty	Seller	Useful at scale, unnecessary for hypothesis testing.	Later
Live logistics integration	Seller / Buyer	Adds complexity before the order flow is proven.	Later
Advanced analytics	Seller	Optimisation layer, not an MVP requirement.	Later

Explicitly Out of Scope for MVP

Marketplace discovery, seller storefronts, advanced inventory, live logistics, returns/disputes, accounting, CRM, loyalty, promotions, AI assistance and advanced reporting.

Why This Scope

The MVP is intentionally narrow. Its purpose is not to prove that a full social-commerce platform can be built. Its purpose is to test one behaviour change: whether a seller and buyer will use a simple checkout link to structure the final step of an order that began in chat.
